

The image displays two screenshots of an Arduino Serial Monitor window. The top screenshot shows the following output:

```
hi: 0.212906  
sup: 0.787094  
  
hi: 0.139888  
sup: 0.860112  
  
hi: 0.241016  
sup: 0.758984  
  
hi: 0.088057  
sup: 0.911943
```

The bottom screenshot shows the following output:

```
hi: 0.770406  
sup: 0.229594  
  
hi: 0.904854  
sup: 0.095146  
  
hi: 0.787084  
sup: 0.212916  
  
hi: 0.786297  
sup: 0.213703  
  
hi: 0.849272  
sup: 0.150728  
  
hi: 0.853756  
sup: 0.146244  
  
hi: 0.868825  
sup: 0.131175
```

Bug fix: The model uses *mse* and *mae* for loss and metric, which is not correct for a multi-class classification task. I changed them to ***categorical_crossentropy*** and ***accuracy*** respectively, and changed the downstream graph to show ***accuracy*** from *mae*.
